

CS411 Team Assignment 2 - User Stories: US1 (revised)

Group 20 - Manish Patel, Ji Zhang, Chen Feng, Curtis Mason and Takamitsu Shirono

**Login:** Log-in page → Google Login → OAuth (Sync Google Calendar)

Upon entering our web application, the user will be asked to sign-in via Google OAuth to login and sync their Google Calendars. The user will have to make sure their calendar is public. A successful login will allow the user to continue into the application (happy path). An unsuccessful login will have OAuth prompt you to try and login again (exception).
