

## CS411 Team Assignment 2 - User Stories: US3.1 (Weather/Holiday Handling)

Group 20 - Manish Patel, Ji Zhang, Chen Feng, Curtis Mason and Takamitsu Shirono

### **Calendar Features:**

#### **Weather/Holiday Handling:**

Users will see the incorporation of weather/holiday information. The main purpose here is to have options for showing days that are good for outdoor events and/or holidays that could preclude possible indoor activities. Thus, users will signify whether their activity will be indoor or outdoor and maybe even choose from a pre-made list in order to differentiate between different activities (i.e. park → sunny weather, but skiing → snow, etc.). Additionally, the App will inform the user about national holidays and display such. If API is down, users will be informed and the option to select their activity as outdoor or indoor will be limited.
