CS411 Team Assignment 2 - User Stories: US3.2 (Available Times Display)
Group 20 - Manish Patel, Ji Zhang, Chen Feng, Curtis Mason and Takamitsu Shirono

Calendar Features:

Available Times Display:

Users will be able to choose from time slots that are mutually free/convenient for the users. The available time slots will be displayed in "green" 30-minute increments. If we see that there are no free times between the two people, then we would see all "red" time slots indicating it (exception). If the event is marked as an outdoor activity and the weather is not suitable for any of the time slots, then we would see this as "red" (exception), refer to **Weather/Holiday Handling** for further details. The app will then prompt the user to choose a different day/week to look for a meeting time.
